Ovarian Cancer

- Ovarian cancer was the 14th most common cancer and the 8th leading cause of cancer death in Louisiana women from 2010 to 2014.¹
- Between 2010 and 2014, the incidence rate of ovarian cancer in Louisiana was the 3rd lowest and the mortality rate was the 6th lowest in the U.S.¹
- About 260 new ovarian cancers are expected to be diagnosed and about 170 patients are expected to die of ovarian cancer in Louisiana in 2017.²

Notes:
State Cancer Registries may provide more current or more local data.
Data presented on the State Cancer Profiles Web Site may differ from statistics reported by the State Cancer Registries (for more information).
Source: Death data provided by the National Vital Statistics System public use data file. Death rates calculated by the National Cancer Institute using SEER*Stat. Death rates (deaths per 100,000 population per year) are age-adjusted to the 2000 US standard population (19 age groups: <1, 1-4, 5-9, ..., 80-84, 85+). The Healthy People 2020 goals are based on rates adjusted using different methods but the differences should be minimal.
Population counts for denominators are based on the Census 1969-2015 US Population Data File as modified by NCI.
* Data have been suppressed to ensure confidentiality and stability of rate estimates. Data is currently being suppressed if there are fewer than 16 counts for the time period.
