Major areas of research interest

Pediatric exercise physiology, nutrition and behavioral counseling as it relates to the screening, diagnosis, design, implementation and evaluation of interventions to prevent and treat chronic diseases in childhood including: 1) Pediatric obesity and metabolic syndrome, 2) Type 2 diabetes during childhood, 3) Pediatric asthma, musculoskeletal, and emotional disorders, 4) nutritional genomics. I am also interested in how the environment and behavior of mothers, infants, toddlers, pre-and-elementary school children and adolescents interact in genetic expression and physiological studies related to pediatric obesity and chronic disease including aspects of fetal programming and early childhood development.
