

CLINICAL IMAGE Reportability Using Imaging RADS (Reporting and Data Systems)

Since 2018, SEER has designated the following categories of imaging RADS to be clinically REPORTABLE:

○ **LI-RADS (LIVER Cases)**

- Category **LR-5 OR LR-5V ONLY**
- Use the date of the LR-5 or LR-5V scan as the date of diagnosis when it is the earliest confirmation of the malignancy.
- If there is no statement of the LI-RADS score but there is reference that a lesion is in the **Organ Procurement and Transplantation Network (OPTN) 5 category**, report based on the OPTN class of 5. OPTN class 5 indicates that a nodule meets radiologic criteria for hepatocellular carcinoma

○ **PI-RADS (PROSTATE Cases)**

- Category **4 OR 5 only**
- **Are to be considered as REPORTABLE**, unless there is other information to the contrary.
- **Per SINQ 20170023**, use the date of the PI-RADS 4 or 5 scan as the date of diagnosis when it is the earliest confirmation of the malignancy.
